DETAILED ACTION

Response to Amendment

- 1. This office action is in response to amendment filed on 1/05/05.
- 2. Claims 1-16 are presented for examination.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1 4, 7, 10 are rejected under 35 U.S.C. 102(b) as being anticipate by Patel el al. (U.S. Patent No. 4,881,001).

Referring to claim 1, Patel teaches a pole ring (figure 1) for a D.C. motor housing, comprising:

several retaining projections (16) provided at an outer circumference, said retaining projections radially securing and axially retaining the pole ring in the D.C. motor housing (30), the retaining projections comprising a retaining surface pointing oppositely to a mounting direction for mounting the pole ring in the D.C. motor housing (the direction of arrow A, figure 7).

Referring to claim 2, Patel teaches the pole ring wherein said retaining surfaces (the surface of projection 8b) have a sharp edge pointing radially outward (figure 1).

Referring to claim 3, Patel teaches the pole ring wherein said retaining surfaces extend substantially radially (figure 2).

Application/Control Number: 10/647,952

Art Unit: 2834

Referring to claim 4, Patel teaches the pole ring wherein said retaining projections extend in a longitudinal direction (the projections 16 extend in longitudinal direction according to the diameter of the lamination 14).

Referring to claim 7, Patel teaches the pole ring wherein each of the retaining projections extends no more than half the length of the pole ring (figure 1).

Referring to claim 10, Patel teaches an electric motor (figure 9), comprising:

a rotor (not shown) arranged in a housing (30), and

a pole ring (figure 1), particularly for a D.C. motor, with several retaining projections

(16) provided at the outer circumference, said retaining projections for the secure radial and axial retainment in the housing (30), the retaining projections comprising a retaining surface pointing opposite to a mounting direction for mounting the pole ring the housing, the retaining projections surrounding the rotor.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 11 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patel further in view of Yoshida (U.S. Patent No. 5,057,730).

Referring to claim 11, Patel teaches the claimed invention, except for the added limitation of the electric motor further comprising a bearing and a retaining disc.

Application/Control Number: 10/647,952

Art Unit: 2834

Yoshida teaches the electric motor wherein a bearing (the ball bearing) arranged in the housing (2), for bearing the rotor shaft, and a retaining disc (the plate 8) for securing the position of the bearing, and the pole ring fixing the retaining disc (figure 1).

Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Patel's motor with the bearing and the retaining disc as taught by Yoshida. Doing so would secure the bearing, the magnets in the motor.

Referring to claim 12, Yoshida teaches the electric motor wherein said retaining disc comprises an inner portion contacting the bearing and an outer portion contacting the pole ring (the plate ring 8, figure 2).

7. Claims 13 – 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patel in view of Howe et al. (U.S. Patent No. 6,774,518 B2).

Referring to claim 13, Patel teaches the claimed invention, except for the added limitation of the motor housing made by soft material.

Howe teaches a motor with the housing made by plastic (soft material) for reducing the cost of making the motor.

Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to using soft material for the housing in the motor as taught by Howe.

Doing so would reduce the cost of making the motor. Furthermore, it has been held to be within the general skill of a worker in the art to select a known material in the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin 125 USPQ 416*.

Application/Control Number: 10/647,952 Page 5

Art Unit: 2834

Referring to claim 14, Patel teaches the electric motor wherein the plurality of retaining projections (16) comprise a retaining surface pointing opposite to a direction for mounting the pole ring in the motor housing (figure 1).

Referring to claim 15, Patel teaches the electric motor wherein said retaining surfaces have a shaft edge pointing radially outward (the edge of projection 16 pointing out for its circumferential).

Allowable Subject Matter

- 8. Claims 5-6, 8-9, and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 9. The following is an examiner's statement of reasons for allowance: the record of prior art does not show a pole ring for a DC motor with each of retaining projections has a guiding chamfer facing to the mounting direction of the motor, and a set of real retaining projections axially offset with a set of front retaining projections.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

10. Applicant's arguments with respect to claims 1 - 12 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leda T. Pham whose telephone number is (571) 272-2032. The examiner can normally be reached on M-F (8:30-6:00) first Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on (571) 272-2044. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
